NOTE: Schedules, activities, excursions and routes, may changed depending on weather conditions or force majeure, according to the captain estimation.

TRACK OF NAVIGATION

SPECIAL CRUISE... ITS PLACES

AMALIA GLACIER

We follow Estero Peel until we come to Amalia Glacier, located in the middle of the Southern Ice Field - the third most important fresh water reserve in the world. It's elongated silhouette seems to fall off the mountains, and is an incredibly beautiful sight. Its ice tower and the contrast of its coloured ice against the mountains are spectacular. Amalia Glacier has an approximate width of some 2.5 kilometres and an elevation of 70 metres. The most important part of this ice mass is fed by the heavy snowfall that affects the region during most of the year. When Skorpios III reaches this beautiful site, the ship sails to its front wall and then follows its shores from north to south to catch as much as possible of its gorgeous azure hues. This glacier is enormously important for science as it has a volcano that rises from its very centre. This is Mount Reclus, which is a total mystery to volcanologists because of its location and behaviour.

EL BRUJO GLACIER

The end of Fjord Asia has a beautiful glacier with absolutely magnificent surroundings. This is the El Brujo Glacier. Our adventure includes lowering our boats and approaching the glacier to reach its half formed magmatic rock, which will show us the way in which the glacier has modelled its surroundings. We will also have a panoramic view of this immense ice wall.

PIO XI GLACIER

As we keep on sailing north along the waters of Sound Eyre, nature offers us an amazing sight, the absolute and incredible beauty of Pio XI Glacier. The front wall of this gigantic ice formation is some 6 kilometres wide and 75 metres high as an average,

SPECIAL CRUISE... ITS PLACES

although some of its peaks reach elevations of some 90 metres. This is the largest glacier in the southern hemisphere. It covers an area of 1,265 km², which means that it could contain a city as large as Santiago, Chile. One of its most notable features is that it is one of the few glaciers in the world that continues to develop, in fact, it has grown by more than 10 kilometres over the past 50 years. The sight as we sail through the ice floes that the glacier drops into the sea is impressive and incredibly beautiful, as it brings us closer to nature and to our inner selves.

PUERTO EDEN

Puerto Eden is a fishing village on Isla Wellington, the birthplace of the Kaweskar or Alacalufe people. This tiny village has 300 inhabitants, the majority of whom are small scale fishermen. This is the place to buy arts and crafts made by the last descendants of the Kaweskar.

CALETA TORTEL

It is a village composed by 600 residents, which is located in the Aysen Region, between the Northern Ice Fields and Southern Ice Fields. It has a great natural beauty, surrounded by islands, channels and estuaries which they've strengthened the tourism development and the fishing and forestry activities. Its wooden houses, stairs, walkway and bridges are typical in this zone, which is also used like streets.

QUITRALCO FJORD

Quitalco Fjord is an ancient sea bed surrounded by enormous snowy mountains, with an exuberant, dense and unique forest that has a warm microclimate and is surrounded by a calm and transparent sea. This is where Skorpios has a paradisiacal place for its passengers, with warm and pure thermal volcanic springs with temperatures ranging between 32° and 38° C, with indoor and outdoor pools, and hot spring baths and steam baths. Trekking in the middle of this southern forest is another way of enjoying the beauty of the area. Here, we will eat a Chilean and Patagonian barbecue. Quitalco means "Fire Water" in native language.

DALCAHUE, CHILOE

Dalcahue, located in the central part of Chiloe, is the original location of the Huilliche ethnic group. At this place we will spend a couple of hours to explore its streets, its craft fair, visit the Anthropological Ethnographic Museum and the church Nuestra Señora de los Dolores, which was declared a National Monument in 1971 and a World Heritage Site in 2000.
